

CASE STUDIES

SCRIVE

Scrive is a mobile app solution meant to provide an e-signature at the point-of-sale transaction. Due to the specifics of the application, it is heavily focused on the tablets.

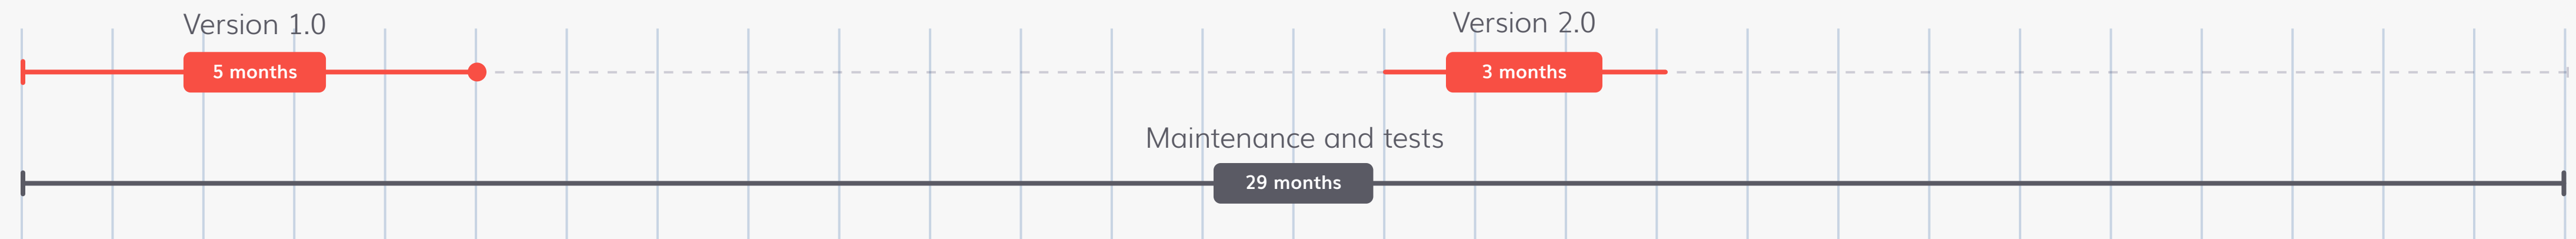

Scope of work:

- Incorporating web-based solution into mobile
- Frequent running of updates in the app
- Implementing a screen saver in the app if the device is not actively used. This is not a conventional feature in the mobile apps but was introduced in Scrive to meet the needs of the retailers.
